

Volvo Group Safety Vision

Zero accidents with Volvo Group products

The Safety Vision provides a distinct direction for all our safety work, in all business operations and in all markets. Our vision of zero accidents is a way of thinking, a mental image of an optimum future state. We are committed to always striving towards zero accidents with Volvo Group products.

It is a fact that most accidents involve factors that are beyond our control. We are well aware that our products cannot prevent all accidents by themselves, regardless of how safe the products are. Accidents can nevertheless happen, due to human error and the environment in which the products are used. Therefore, cooperation with other concerned stakeholders in society will be needed to reach our vision.

As long as there is a risk of accidents occurring, Volvo will pursue this vision through high quality as well as innovative products that reduce the frequency of accidents and their consequences.
